DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1 and 2 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1 and 2 recite parenthetical information (i.e. " π = crowing amount of outer ring + crowing amount of inner ring + crowing amount of roller $\times 2$ ") that render the claim indefinite, as it is not clear if this information is being used to defined the scope of the claimed apparatus.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. **Claims 1 and 2, as best understood, are rejected under 35 U.S.C. 103(a) as being unpatentable over Takeuchi et al. (USP 5,007,747).** Takeuchi et al. discloses (see Fig. 1) all of the limitations of a similar device comprising:
- An outer ring (1) having an outer ring raceway surface undergoing crowning.

- An inner ring having (5) an inner ring raceway surface undergoing crowning.
- Plural tapered rollers (3), having a rolling surface undergoing crowning, rolling universally between said outer and inner ring raceway surfaces.

Takeuchi et al. fails disclose a total crowning amount being 50 μm or more, the crowning ratio of the outer ring being 40% or more, the roller crowning ratio being 20% or less, and the inner wheel crowning ratio being 10% or more.

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the device of Takeuchi et al. such that the total crowning amount is 50 μm or more, the crowning ratio of the outer ring is 40% or more, the roller crowning ratio is 20% or less, and the inner wheel crowning ratio is 10% or more, since it has been held that discovering optimum value or a result effective variable involves only routine skill in the art.
